SPECIFICATION

Natural Hog Casings

Natural Hog Casings supplied by Australasian Casing Co. Pty. Ltd have been prepared according to the code of practice for the Hygienic Manufacturing of Natural Casings when produced within Australia.

All casings that have been imported into Australia have been prepared in accordance with the rules and regulations pertaining to those counties requirements for the production of Natural Casings. The casings are imported as per Quarantine guidelines set out by ANZFA/AQIS.

All Casings are stored prior to despatch in an Export registered Establishment which is under the supervision of AQIS.

The ingredients of the casings are Natural Porcine Intestines, Water and Salt.

The casings are cured in and preserved with Salt which is rinsed off of the casings prior to filling.

The casings are either delivered salted in hanks or pre shirred onto plastic tubes to speed up the filling process.

It is recommended that the casings be stored in a refrigerated environment at approx. 5 degrees Celsius until they are to be filled, and should always be kept under refrigeration once the salt is washed out of them to make them ready for use.

For Further Information Please Contact the undersigned.
